

# EMC Documentum ScanXtender

## Document Capture for EMC Documentum ApplicationXtender

### The Big Picture

- Flexible configuration to meet any production environment's needs
- Seamless integration with ApplicationXtender
- Feature-rich and easy-to-use functionality for large-volume image acquisition and indexing

Organizations cannot afford to leave critical business information locked in paper documents, which are expensive to store and difficult to transport, search, share, or manage in a workflow. Employees need on-demand access to key documents so they can make solid business decisions and respond rapidly to customer requests. Documents that are located in filing cabinets, paper archives, and personal hard drives will serve the organization and its employees much better if they are stored electronically and managed in an enterprise repository.

### High-volume batch scanning and indexing for ApplicationXtender

EMC Documentum<sup>®</sup> ScanXtender provides fast and efficient batch scanning capabilities for the ApplicationXtender system. As a high-speed batch scan and index module with configurable processing queues, ScanXtender seamlessly integrates with ApplicationXtender to create a complete, high-volume document capture solution that is easy to install, configure, and operate.

### Full-featured batch scan and index

With ScanXtender, users can simultaneously perform work on the same batch from multiple workstations—including any combination of scan and index workstations. ScanXtender features auto-index, key reference file, and duplicate previous index features. Other advanced features include auto page rotation, thumbnail display, blank page separation, minimum page size discard (blank page deletion), automatic index increment, and index character carry-over. ScanXtender incorporates an index locator feature that allows users to zoom in on regions of a document to accelerate the creation and population of index fields.

ScanXtender also leverages the batch indexing feature of ApplicationXtender and offers a complete set of batch scan and index functions—including input, index, and output processing that scans (imports), indexes, and releases documents to any ApplicationXtender database. ScanXtender is an affordable and effective solution for users not requiring advanced image processing, bar code recognition, or zonal OCR indexing features.

## About Documentum software from EMC

Documentum software from EMC Corporation includes enterprise content management solutions that enable organizations to unite teams, content, and associated business processes. With a single platform, EMC Documentum software enables people to collaboratively create, manage, deliver, and archive the content that drives business operations, from documents and discussions to e-mail, Web pages, records, and rich media. The Documentum enterprise content management platform makes it possible for companies to distribute all of this content in multiple languages, across internal and external systems, applications, and user communities. As a result of deploying Documentum, thousands of the world's most successful organizations are harnessing corporate knowledge, accelerating time to market, increasing customer satisfaction, enhancing supply chain efficiencies, reducing operating costs, and improving their overall competitive advantage.
